SUMMARY

Results-driven Full Stack JavaScript Developer with 3+ years of professional experience designing, building, and deploying scalable web applications from frontend to backend. Specialises in React.js, Next.js, TypeScript, Node.js, Express.js, and PostgreSQL. Proven track record of delivering enterprise SaaS platforms, AI-powered healthcare products, ride-hailing admin systems, e-commerce solutions, and charity platforms for international clients including **Operator Labs** and **Johnson & Johnson**. Adept at architecting secure REST APIs, JWT-based authentication systems, role-based access control, and high-performance, SEO-optimised frontends.

SKILLS

- HTML5 & CSS3
- JavaScript ES6+
- TypeScript
- React.js
- Next.js
- JWT Authentication
- RBAC
- Zod Validation
- Tailwind CSS / MUI
- Redux Toolkit
- TanStack Query
- React Hook Form
- Next-Auth
- GraphQL / Apollo
- Git & GitHub
- Vercel / Netlify
- Node.js
- Express.js
- PostgreSQL
- Prisma ORM
- REST API Design
- Ant Design / Bootstrap
- Framer Motion
- Agile / Scrum

PROFESSIONAL EXPERIENCE

QMH Technologies (Private) Limited

Full Stack Developer — November 2025 – Present

- Architect and deliver full-stack web applications using Next.js, Node.js, Express.js, and PostgreSQL with Prisma ORM, owning the solution end-to-end from database schema to production deployment.
- Design and implement secure, well-documented REST APIs featuring JWT authentication, role-based access control (RBAC), and Zod input validation — ensuring data integrity and protection against common API vulnerabilities.
- Build feature-rich admin dashboards and content management panels with complete CRUD capabilities covering products, users, orders, and media assets.
- Engineer responsive, accessible frontend interfaces with React.js, TypeScript, and Tailwind CSS, achieving high Lighthouse scores and Core Web Vitals targets.
- Lead technical discussions, conduct code reviews, and mentor junior developers to uphold code quality and consistent engineering standards across the team.

Operator Labs

Frontend Developer — April 2024 – October 2025

- Engineered the Operator Labs marketing website (operatorlabs.ai) for an enterprise AI healthcare company — building conversion-optimised product, use-case, security, and blog sections fully aligned with HIPAA and SOC 2 compliance messaging.
- Built the Operator Labs Voice AI Platform (voice.operatorlabs.ai), a real-time SaaS dashboard for AI voice agents that automate insurance payer calls, prior authorisation, and patient collections for healthcare providers.
- Developed the Raheem Ud Din Naeem Welfare Foundation website (rwfglobal.org) using Next.js — a production-grade charity platform with donation flows, program pages, impact metrics, and donor stories.
- Architected a no-code platform for AI agentic bots using Next.js and Node.js, enabling non-technical users to configure and deploy AI-driven automation workflows — eliminating the need for custom development per client.
- Delivered the Forloops company website integrated with a WordPress CMS via Apollo GraphQL, enabling content teams to manage site copy without developer involvement.
- Contributed to enterprise-grade deliverables for **Johnson & Johnson**, building tailored interfaces that met multinational quality and compliance standards under tight deadlines.
- Strengthened backend services using Node.js and Express.js, building reusable API modules and optimising response times through effective query design and caching strategies.

QMH Technologies (Private) Limited

Junior Frontend Developer — February 2023 – April 2024

- Independently delivered **42 client websites** — each built to a unique brief — maintaining consistent quality across modern design, responsive layouts, cross-browser compatibility, and performance optimisation.
- Led the frontend build of Maru.Derm, a scalable Next.js e-commerce platform for a skincare brand, implementing product catalogues, filters, cart flows, and checkout integration.
- Developed the Maru.Derm Admin Panel in React — a fully-featured back-office tool with product, order, user, and content management capabilities.
- Introduced Redux Toolkit and TanStack Query across the team's project stack, standardising state management patterns and reducing re-render overhead.
- Collaborated daily with designers and backend engineers in an Agile workflow, consistently meeting sprint goals and client sign-off milestones.

The AppMakers

Junior Frontend Developer (Internship) — July 2022 – February 2023

- Built a full-stack online auction system for car parts as a capstone project, covering user authentication, listing creation, real-time bidding logic, and payment gateway integration — demonstrating end-to-end development capability.
- Contributed to the team's client project pipeline by developing responsive web interfaces in HTML5, CSS3, and JavaScript under senior developer guidance.
- Participated in Agile sprint ceremonies via Asana, improving task estimation accuracy and consistently delivering assigned features within sprint cycles.

PROFESSIONAL PROJECTS

Cabrely — Ride-Hailing Admin Platform

admin.cabrely.com

Designed and built the complete backend and admin interface for a ride-hailing application. The system handles driver onboarding and approval, user account management, live ride operations, trip history, earnings reporting, and multi-role admin controls — secured with JWT authentication and RBAC.

Tech Stack: Node.js · Express.js · PostgreSQL · Prisma ORM · JWT · RBAC · Next.js · React.js · Tailwind CSS · REST APIs

Operator Labs — AI Healthcare Website & Voice AI Platform

operatorlabs.ai · voice.operatorlabs.ai

Enterprise marketing website and real-time SaaS product platform for an AI voice-agent company serving the US healthcare market. The marketing site targets enterprise buyers with HIPAA / SOC 2 trust signals and detailed product pages; the platform UI provides agents, call queues, outcomes dashboards, and workflow management for revenue cycle teams.

Tech Stack: Next.js · React.js · TypeScript · Tailwind CSS · SEO Optimisation · Responsive Design · SaaS Dashboard Architecture

RWF Global — Welfare Foundation Website

rwfglobal.org

Full-featured website for Raheem Ud Din Naeem Welfare Foundation, a charity serving vulnerable families in Azad Kashmir and Pakistan. Built with Next.js, the platform supports online donations, detailed programme listings, impact statistics, beneficiary stories, and a contact system — designed for trust, accessibility, and international donors.

Tech Stack: Next.js · React.js · TypeScript · Tailwind CSS · Donation Flow · SEO

Donation & Welfare Foundation Platform — Full Stack

Full-stack donation management system with donor CRUD, configurable donation campaigns, payment initiation APIs, bank transfer instructions, JazzCash / Easypaisa payment readiness, admin proof-of-payment review, and a Prisma-powered relational data model for donors, donations, and programmes.

Tech Stack: Node.js · Express.js · PostgreSQL · Prisma · Zod · JWT Auth · REST APIs · Next.js

Maru.Derm — E-Commerce Platform & Admin Panel

End-to-end e-commerce solution for a skincare brand: a performant Next.js storefront with advanced product filtering and checkout, backed by a fully-featured React admin panel for inventory, order fulfilment, customer records, and promotional content management.

Tech Stack: Next.js · React.js · Node.js · Redux Toolkit · TanStack Query · Tailwind CSS

No-Code Platform for AI Bots

Drag-and-drop no-code builder allowing non-technical users to design, configure, and deploy AI agentic bots. Reduced time-to-deploy for each new AI client from weeks of custom development to a self-service setup flow.

Tech Stack: Next.js · Node.js · Express.js · React.js · GraphQL · Apollo GraphQL

AI Voicebot Solutions

Developed interactive, browser-based AI voicebot interfaces for international clients — combining real-time WebSocket audio streaming with a responsive Next.js / React frontend for seamless human-to-AI conversation flows.

Tech Stack: Next.js · React.js · Node.js · TypeScript · WebSocket · REST APIs
